FOREWORD

Dairy Development Authority (DDA) is committed to the production and dissemination of quality dairy statistics that meet user needs to promote usage.

This Statistical Abstract is the key annual publication through which the Authority disseminates its dairy statistical updates generated throughout the year.

For the Authority to constantly track the implementation of its development agenda and realize its Vision of “Dairy for improved health and prosperity of Ugandans”, quality statistics will constitute part of the enabling environment for measuring progress, input requirements, outputs, outcomes, and the impact of various strategic interventions.

The Statistical Abstract FY: 2022/23 covers the key indicators of the dairy sector in Uganda. Information on these indicators is structured based on either a calendar year starting from January to December or Financial Year starting from July to June, depending on data availability. This publication has been compiled using data obtained from the Authority, Uganda Bureau of Statistics (UBOS), and Uganda Revenue Authority (URA) among others.

DDA appreciates the Government of Uganda for its financial support, other Government Ministries and Agencies especially UBOS and URA for the support rendered during the compilation of this Statistical Abstract. Appreciation also goes to the Members of the Statistical committee at the Authority, staff, and the planning unit for their efforts towards this publication.

It is our hope that the statistical information presented in this publication will be used to make informed decisions.

Samson Akankiza Mpiira

EXECUTIVE SUMMARY

Dairy Development Authority is a statutory body under the Ministry of Agriculture, Animal Industry and Fisheries (MAAIF). It was established by the Dairy Industry Act, 1998 with a Mandate to develop and regulate the dairy industry in Uganda. The Act under section 5 of the Dairy Industry Act 1998 mandates the Authority to.

1. Register and license milk processors and traders.
2. Support dairy farmers' marketing Organizations.
3. Advise the government on milk standards.
4. Coordinates all dairy processing and marketing promotional activities.
5. Controls and regulates dairy and dairy related import and export activities.
6. Pool dairy processing and marketing data.
7. Advise the Government on research priorities of the dairy sub sector.

The Act provides for routine data production of milk processors and traders, production, productivity, export, import, pricing, and consumption statistics. It directs the generations, management, analysis, and dissemination of data along the entire value chain.

Due to the continued demand for dairy statistics, DDA has redefined its statistical development.

The dairy subsector continues to grow steadily amidst all the economic and geographical challenges such as inflation, market instability and climate changes. Below is a summary of the dairy statistics that are detailed in this abstract.

The herd size in Uganda has increased over the last eight years and is estimated at 16.7 million heads of cattle as of 2023 from 13million heads in 2013.

Milk production has tremendously increased over the years from 2.51Billion liters in 2018 to 3.85 billion liters in 2023.

Milk production and productivity differs according to different Milk Sheds. The Southwestern, Central and Midwestern Milk Sheds produce the most milk in the country. The national average milk productivity is 4.96 liters.

There are 729 registered Milk Collection Centers (MCCs) with a capacity of 2.8 million liters and 12 bulking centers across the country with a total capacity of 266,560 liters.

The country has a total of 193 registered road milk tankers as of December 2022.

The Country has approximately 130 dairy processors that are active. 8 of these are large scale processors, 38 medium scale processors and 84 are small scale processors.

The average milk consumption per capita is currently approximated at 63 liters (FAO report, 2022). The average national farmgate and retail prices were highest in the month of August i.e. Ugx 1391 and Ugx 1954 respectively. On average, prices were highest in the Northern Milk Shed and lowest in Southwestern Milk Shed.

The Country imported dairy products valued at approximately USD 7.6 million from a total of 41 Countries. Dairy products were exported to 20 Countries with an approximate total value of USD 264.5 million in FY 2022/23 showing an increase of 158% compared to FY 2021/22. Milk powder was the most exported product representing approximately 54.2% of the total exports.

CHAPTER ONE: INTRODUCTION

Statistical data is very important for both planning and decision making in the Authority. Due to the growing needs of statistics relating to the dairy sector, the Authority has been able to publish its first Edition of the Statistical Abstract. The Authority in collaboration with Uganda Bureau of Statistics (UBOS) has managed to support the collection, compilation, analysis, and production of this 2022/23 Statistical Abstract. The Authority is implementing its Strategic plan for Statistics and part of the publications required as stated in the Third Plan for Statistical Development (PNSD III) is the Annual Statistical abstract.

The mandate: To develop and regulate the dairy sector in Uganda.

The Vision: Dairy for improved health and prosperity of Ugandans.

The mission: To increase productivity and competitiveness of the dairy sector and enhancing its contribution to population health and wealth of all Ugandans.

Key performance strategic areas

- Dairy production and productivity,
- Post- harvest handling,
- Dairy value addition and market competitiveness,
- Quality Assurance and domestic dairy consumption promotion,
- Dairy Institutional Strengthening.

Governance and Organization structure of DDA

The Authority is governed by the Board of Directors and the Executive Director is the Chief Executive Officer of the Authority. In the absence of the Board, the Minister of State for Animal Industry assumes overall management of the Authority.

Dairy Milk Sheds in Uganda

The Authority is divided into six (6) Milk Sheds of Central, Southwestern, Northern, Northeastern, Midwest and Eastern.

Figure 1: A map showing the DDA Milk Sheds.

National Milk Sheds

Source: DDA 2010

KEY:	
South West - 25%	Central - 24%
Mid West - 12%	Eastern - 21%
Northern - 11%	Karamoja - 7%

Source: DDA

Central Milk Shed covers areas of Buganda and the office is in Kampala at DDA head office. Southwestern Milk Shed covers areas of Ankole, Kigezi, Rukiga and Rwenzori sub regions and its regional office is in Mbarara City. The Northern milk shed covers areas of Acholi and Lango sub regions with its offices at Gulu city. The Northeastern Milk Shed covers areas of Bugisu, Teso, Sebei, and Karamoja sub regions with its office in Soroti City. Midwestern Milk Shed covers areas of Bunyoro and parts of Buganda with its office situated at Kiboga district. Eastern Milk Shed covers areas of Busoga, Bukedi, and parts of Elgon sub regions with its Offices still housed at the Headquarters.

CHAPTER TWO: MILK PRODUCTION

2.1 Herd Size

Uganda's herd size is composed of different breed types spread throughout the Country. The various types of breeds kept are the local breeds (Ankole long horned cattle and Zebu), Jersey, Guernsey, Friesian, and Cross breeds, with the local breeds being predominant especially in the areas of North and Northeastern Uganda. The herd size in Uganda has increased over the last eight years and is estimated at 16.7 million heads of cattle as of 2023 from 13million heads in 2013 as seen in Table 1.

Table 1: National herd size trend from 2013 to 2023

Year	2013	2015	2016	2017	2018	2019	2023
Herd Size	13,020,000	14,204,948	14,368,000	14,189,000	14,572,103	14,784,856	16,722,978

Source: UBOS reports

2.2 Milk Production

Milk production is dependent on several factors such as breed type, farming method, health conditions and seasonal conditions among others. Milk production has tremendously increased over the years from 2.51Billion liters in 2018 to 3.85 billion liters in 2023 showing a 53.4% increase. Table 2 shows the trend of milk production in Uganda over the last few years.

Table 2: Trend of Milk production in Uganda

Year	2018	2019	2020	2021	2022	2023
Milk production (Billion Liters)	2.51	2.52	2.60	2.81	3.21	3.85

Source: DDA Annual reports

2.3 Milk productivity and production by region

Milk production is affected by several factors such as weather, breed type, feeds, and age of the animal among others. Milk productivity per cow varies from region to region due to the varying predominant breed types and farming types. The national average milk productivity is 4.8 liters. As shown in table 3, Central region has the highest average milk productivity per cow (6.6 liters) while Karamoja region has the lowest (2.9 liters). Western region contributed 32.5 percent of the total milk produced in the country followed by central (30.4 percent).

Table 3: Average milk productivity per cow per region

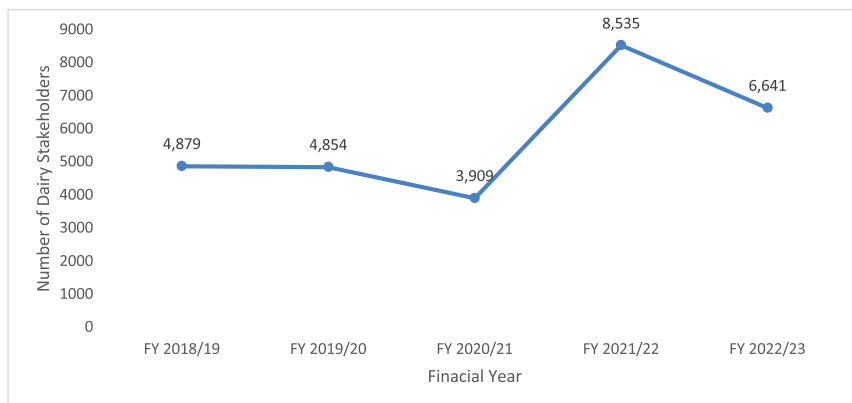

Region	Average productivity/cow Daily	Annual Production
Central	6.3	1,170,823,841
Eastern	4.8	678,274,780
Northern	4.6	320,558,441
Western	6.2	1,252,170,124
Karamoja	2.1	424,504,057
Total	4.8	3,846,331,244

Source: DDA annual report

2.4 Dairy stakeholders trained and skilled.

Training and skilling dairy stakeholders are important components of the dairy value chain in increasing productivity and quality of milk and milk products. The skilling and training are usually on clean milk production and handling practices, feed production and conservation, and value addition among others. There was a decline in the number of dairy stakeholders trained compared to the previous financial year as presented in the figure below.

Figure 2: Trend of Trained Dairy Stakeholders over the five years

Source: DDA annual performance reports

2.5 Farmer groups/Cooperatives supported with farm inputs.

DDA supports farmers with farm inputs such as pasture seeds, milk cans, chuff cutters, milking buckets for demonstration purposes. These are distributed to organized members in a Cooperative or farmer group.

Table 4: Farm inputs procured and distributed in the FY 2022/23

Input type	Quantity
Milking cans	252
Milking buckets	176
Chuff cutters	11
Milking machines	11
Scoops	68
Pasture seeds	1101 kgs
Napier cuttings	220 packs

Source: DDA Activity reports

CHAPTER THREE: MILK COLLECTION, STORAGE AND BULKING

3.0 Milk Collection, Storage and Bulking

Milk storage and bulking is an important component of the dairy value chain. Bulking and storage promote quality and increase access to the market. Raw milk is collected from the farms and stored at Milk Collection Centers and Bulking centers for preservation and marketing.

3.1 Milk Collection Centers by Milk Shed.

MCCs collect and store milk for distribution to the processors and milk sales point. Southwestern Milk Shed has the highest number of Milk collection centers (48.1 percent) followed by the Central Milk Shed (31.2 percent) while the Northern Milk Shed has the least number of Milk Collection centers (0.3 percent) as shown in table 5.

Table 5: Milk Collection Centers by Milk Shed.

Milk Shed	Number of MCCs	Percentage
Southwest	343	48.1
Central	211	31.2
Midwest	108	16.2
Northeast	36	3.0
Eastern	20	1.2
Northern	11	0.3
Total	729	100

Source: DDA register

3.2 Milk Bulking Centers (BCs) by Milk Shed.

Raw milk is collected at Milk Collection Centers which is later bulked at Bulking centers with a higher storage capacity than the MCCs. There are 12 bulking centers across the country with a total capacity of 266,560 liters. Approximately 66.6 percent of the Bulking centers are situated in the Southwestern Milk Shed as seen in Table 6.

Table 6: Installed Capacity of Bulking Centers across the country

Milk Shed	Number of BCs	Total Installed Bulking capacity (Liters)
Midwest	2	60,000
Southwest	8	166,560
Central	2	40,000
Total	12	266,560

Source: DDA register

3.3 Milk Collection Centers (MCCs) and installed capacity

Milk cooler capacity is important in determining how much can be stored based on the total daily production. Milk Collection Centers have coolers with different installed capacities in terms of liters. From table 7, Milk Collection Centers have increased over time from 355 with a capacity of 1.5million liters in 2016 to 729 in 2023 with a capacity of 3.01 million liters.

Southwestern Milk Shed has the highest number of coolers (449) with a capacity of 1.45 million liters followed by central (248) with capacity of 0.94 million liters. Northern Milk Shed has the least in terms of coolers and capacity.

Table 7: Milk Collection Centers' capacity per Milk Shed

Milk Shed	Number of MCCs	Number of Coolers	Installed Capacity (Liters)
Southwest	343	449	1,447,215
Central	211	248	937,993
Midwest	108	122	486,350
Eastern	20	13	37,500
Northeast	36	33	91,100
Northern	11	5	9,000
Total	729	870	3,009,158

Source: DDA Dairy Business registers

Milk coolers are owned by Government of Uganda, farmer groups or Cooperatives and some are privately owned by individuals as indicated in Table 8. Most coolers are owned by private individuals and farmer Cooperatives/ groups. The functional Milk Collection Centers are 90.5% and the rest are not.

Table 8: Milk Cooler ownership and functionality

Ownership	Number of Coolers	Number of MCCs	Functionality
Government	35	47	28
Cooperative/Farmer group	351	277	258
Private	484	405	374
Total	870	729	660

Source: DDA reports

3.4 Inspection of Raw Milk Sales Outlets by Milk Shed

Inspection of milk handling premises is vital in ensuring adherence to dairy standards and regulations for milk and dairy products safety and quality. A total of 3,202 inspection activities on dairy premises and consignments were conducted across the different Milk Sheds during FY 2022/23.

Southwestern Milk Shed had the highest number of inspection activities on premises with coolers (64.5 percent) while Midwestern Milk Shed had the highest number of inspection activities on premises with freezers (35.1 percent) as presented below.

Table 9: Milk handling premises and equipment inspected per Milk Shed

Milk Shed	Number of inspections conducted
Southwest	688
Midwest	358
Central	241
Eastern	141
Northern	83
Northeastern	121
Total	1,632

Source: DDA Inspection Reports

3.5 Inspection of Dairy Exports and Imports.

To ensure quality and safety as well as improving trade performance, all dairy exports and imports are inspected at different border points manned by the Authority's officers. From table 9, a total of 1,610 export and import consignments were inspected and most of the consignments inspected went through Malaba-Busia border post as shown below.

Table 10: Export and import Consignments inspected per border post

Border post	Export/Import Consignments
Busia-Malaba	992
Entebbe Airport	584
Mutukula	34
Total	1,610

CHAPTER FOUR: MILK TRANSPORTATION

4.0 Milk Transportation

Milk transportation is an important component of the dairy value chain because it has a bearing on the quality, safety of the final product, processing costs and the final price to the consumer. The steady increase in milk production coupled with continuous investment in dairy milk collection/bulking and processing facilities requires more insulated road milk tankers as one of the recommended means of milk transportation.

4.1 Registered Road Milk Tankers by Milk Shed

As shown in table 1, the country has a total of 193 registered road milk tankers distributed across the three Milk Sheds of Central, Southwest, and Mid-west. Central Milk Shed has the highest number constituting 51.3 percent followed by southwest (36.3 percent).

Table 11: Registered Road Milk Tankers in 2022 per Milk Shed.

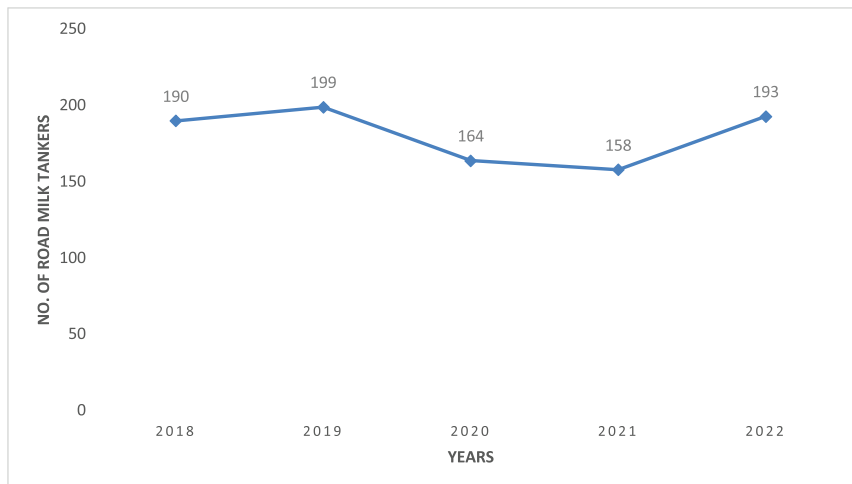

Milk Shed	Number of Tankers	Percentage (%)
Central	99	51.3
Midwest	24	12.4
Southwest	70	36.3
Total	193	100

Source: DDA Dairy Business registers

4.3 Trend of Registered Road Milk tankers overtime.

In the last 5 years, the number of registered milk tankers has been fluctuating. There was a 22.1% increase in the number of registered tankers in the year 2022 from 2021. The trend of five years is as shown in Figure 3.

Figure 3: Registered Road Milk Tankers over the last five years

Source: DDA Dairy Business registers

CHAPTER FIVE: DAIRY PROCESSING

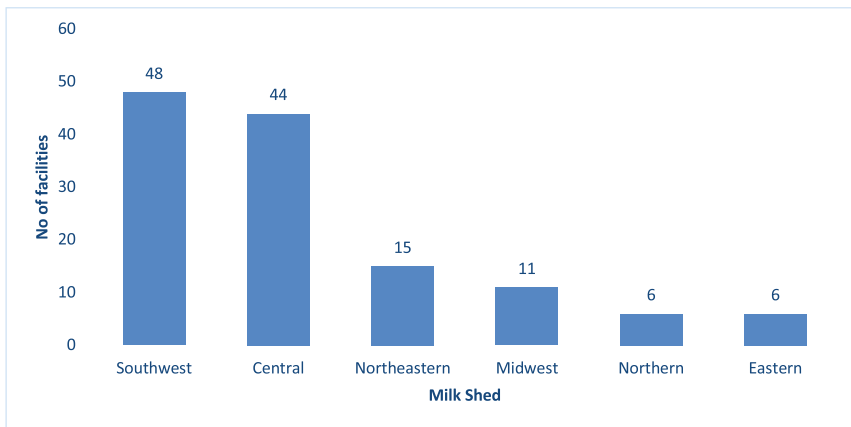

5.0 Dairy Processing

Dairy processing is a very important stage in the dairy value chain as it promotes value addition and increases the shelf life of dairy products leading to increased market access. Processing also boosts the export market for dairy products.

5.1 Dairy Processing Facilities Disaggregated by Milk Shed

Currently, there are 130 dairy processing facilities spread across the country ranging from large, medium, and small scale and cottages. Large scale processing facilities are 8 with the capacity of between 100,000-800,000 liters, medium scale is 38 with installed capacity ranging between 60,000-100,000 liters and small-scale cottages are 84 with an installed capacity ranging between 40-900 liters. Figure 4 shows the different number of processing facilities in different Milk Sheds.

Figure 4: Dairy Processing Facilities Per Milk Shed.

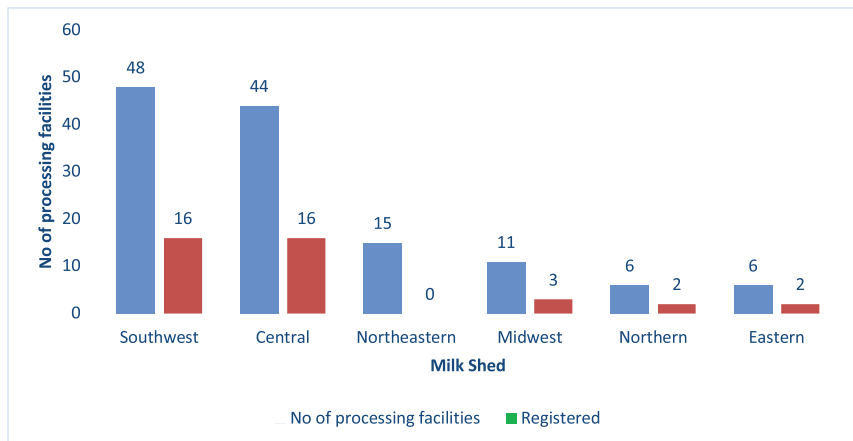

Source: DDA Dairy Business registers

5.2 Registered Dairy Processing Facilities by Milk Shed.

Registration of dairy processing facilities is mandatory as provided for in Part II Section four of the dairy regulations. No person shall undertake any dairy business without a registration certificate issued by Dairy Development Authority.

Out of the 130 dairy processors, only 39 have been registered and licensed by DDA in the year 2022 representing 30 percent. Figure 7 shows the total number of processing facilities against the registered ones in 2022. Some cottages have not picked up completely and are under close supervision and guidance by the Authority Staff in different Milk Sheds to ensure their growth and are in the process of acquiring the necessary requirements for registration.

Figure 5: Processing Facilities by Registration Status per Milk Shed

Source: DDA license register

5.3 Processing Facilities by Milk Shed

Installed and operating capacity of the milk processing facilities has a bearing on the growth of the industry, the volume of milk processed and ultimately the volumes of exports for the country. The total national installed capacity for all processing facilities is 3.4million liters against the operating capacity of 2.3million liters representing 68 percent operating capacity as shown in table 2. Most processing facilities are situated in the Southwestern Milk Shed followed by the Central Milk Shed accounting for 61.6 percent and 37.2 percent of the installed capacity respectively.

Table 12: Installed and Operating Processing Capacities per Milk Shed

Milk Shed	Installed capacity (liters)	Operating capacity (liters)
Southwest	2,100,120	1,432,995
Central	1,267,010	859,430
Northeastern	31,200	8,720
Midwest	7,095	3,515
Northern	2,090	1,360
Eastern	1,595	583
Total	3,409,110	2,306,603

5.5 Milk Processing Facilities Inspections conducted

There are more mushrooming cottages in the country that require constant inspection to ensure that they adhere to dairy standards and regulations for consumer protection. During FY 2021/22, a total of 114 processors and cottages were inspected to ensure compliance with the dairy standards and regulations.

Out of the 114 processors and cottages inspected in the different Milk Sheds, central Milk Shed had the highest number representing 46.5(percent), followed by southwestern (21.1 percent). Eastern Milk Shed had the lowest number of cottages inspected.

Table 13: Processing Facilities inspected per Milk Shed

Milk Shed	Number of Processors inspected
Southwest	24
Central	53
Midwest	12
Northeastern	7
Northern	16
Eastern	2
Total	114

Source: DDA Quarterly reports

CHAPTER SIX: MILK MARKETING AND CONSUMPTION

6.0 Milk Marketing and Consumption

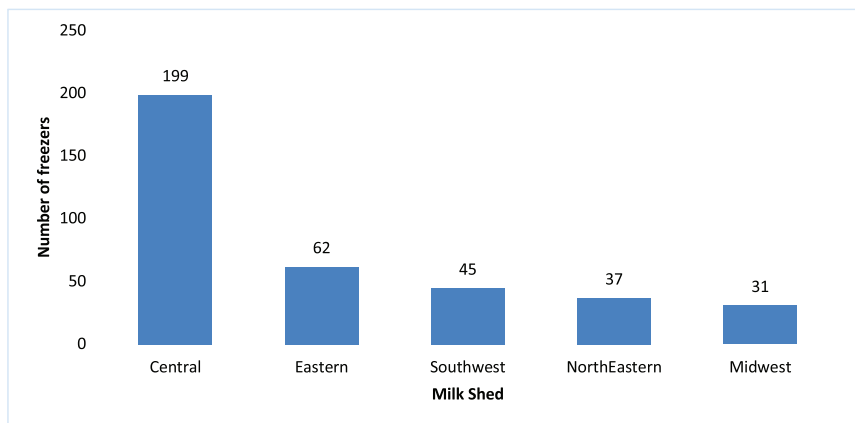

Milk is consumed and marketed in form of raw milk and processed milk and milk products. Milk is marketed at different levels of the value chain i.e. Raw milk is sold right from the farm level, raw milk sales outlets and Milk Collection Centers and processed products from retailers.

The national average milk consumption per capita is 63.5 liters (Milk consumption report, FAO, 2021) against the recommended 200 liters as per World Health Organization (WHO) standards. Most of the milk produced is consumed in raw form especially in rural areas and the greater percentage is consumed in urban areas in form of powder, UHT liquid milk, Yoghurt, and other products.

6.1 Registered Raw milk outlets with Freezers in 2022

Raw milk is retailed in urban sales outlets to the final consumer. Most of these sales outlets have freezers to cool the raw milk awaiting sale. Below is a distribution of registration premises with freezers as of 2022.

Figure 6: Registered Premises with Freezer in 2022 per Milk Shed

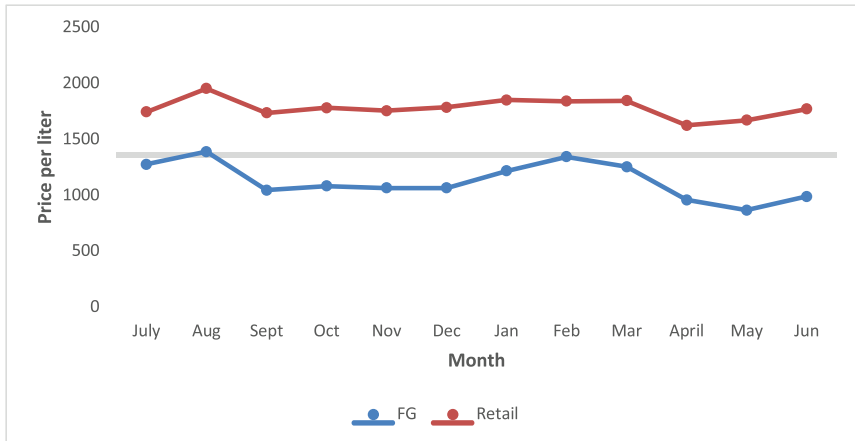

Source: DDA license register

6.2 Raw Milk Prices

National Farm gate and Retail Prices

Milk price analysis is important in informing investment decisions among the prospective investors/dairy farmers and to draw comparison with trading partner states. These prices are compiled and updated monthly for the different Milk Sheds. During the year, the highest average retail and farm gate prices were recorded in the month of August - Ugx 1,954 and Ugx 1,391 respectively unlike the last financial year 2021-22 where the highest average retail and farmgate were in April i.e. Ugx.1,873 and Ugx.1,391 respectively. The average farmgate prices were the same for both financial years as noted. The lowest prices were recorded in the month of May i.e., Ugx.1, 671 for retail and Ugx.868 for farm gate. Figure 7 shows the farmgate and retail prices for the entire year.

Figure 7: Annual National Raw Milk Prices at Farm gate and Retail- FY 2022/23

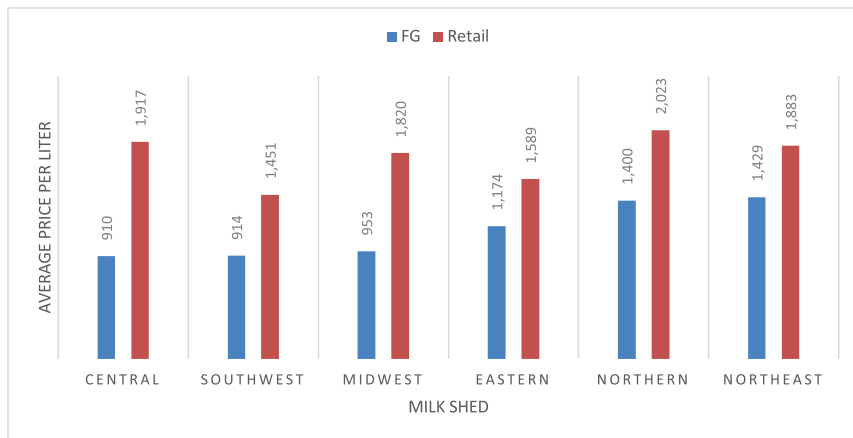

Source: DDA monthly price reports

6.3 Average Raw Milk Price by Milk Shed

As shown in figure 8, the retail prices were highest in the Northern Milk Shed and lowest in Southwestern Milk Shed. For the farm gate prices, the highest was recorded in Northeastern and the lowest recorded in the Central Milk Shed.

Figure 8: Milk Shed Average Raw Milk Prices

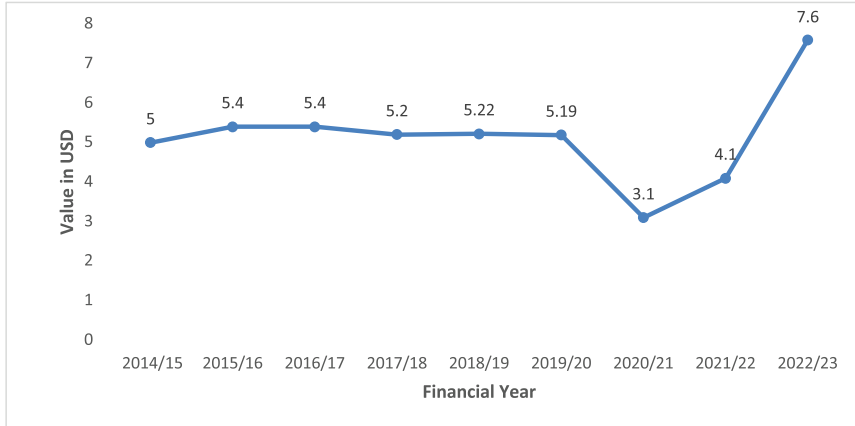

6.4 Dairy Imports

Uganda imported several dairy products from a total of 41 Countries showing a decrease of 2 countries as compared to the last financial year where we exported to 43 Countries across the globe.

The trend of dairy imports has been fluctuating over time with most dairy products being processed domestically replacing imports. However, the value of imports increased sharply from USD 3.1 million to USD 7.6 million between 2020/21 and 2022/23 after a sharp drop from USD 5.19 million in 2019/20 as shown in Figure 9.

Figure 9: Trend of Dairy Imports

6.5. Dairy exports

The Country processed several dairy products that were exported to various countries across the globe. Milk powder was the most exported product during the FY 2022/23 accounting for approximately 54.2% of the total exports followed by UHT (33.1) and the rest of the products as shown below.

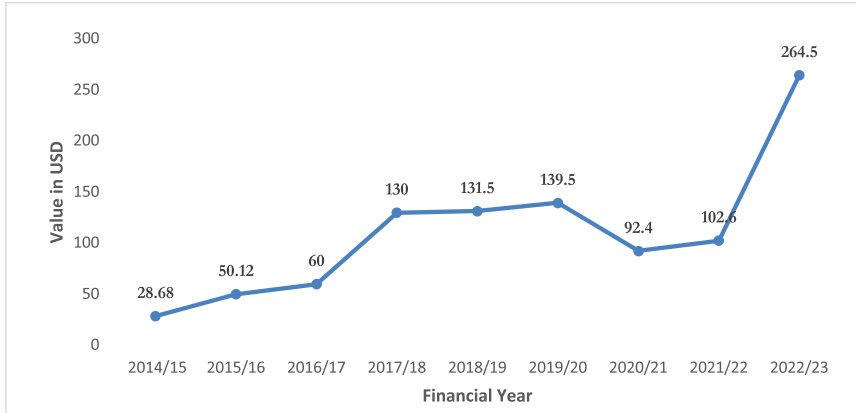

Table 14: Dairy exports by product and value during FY 2022/23

Exports	Value in Ugx
Milk powder	529,021,016,510
UHT	323,058,260,751
Casein	60,891,520,310
Butter	45,159,866,599
Ghee	8,145,989,949
Yoghurt	7,747,564,120
Whey	2,052,806,288
Cheese	286,676,209
Grand Total	976,363,700,736

6.5.1 Trend of Dairy Exports for the last 9 years (FY 2014/15-FY 2022/23)

Dairy exports have been increasing over time except for FY 2020/21 which showed a drop due to the COVID-19 pandemic, however in the last financial year FY 2022/23 there was a sharp increase in the value of exports by about 158%. This is represented on the graph below.

Figure 10: Trend of Dairy Exports in Uganda over the last nine years

Source: URA database

CHAPTER SEVEN: DAIRY QUALITY AND SAFETY STANDARDS

7.0 Dairy Quality and Safety Standards

The Authority is mandated to ensure quality and safety of milk and milk products on the market through the implementation of its regulatory activities. This is done through Inspection and registration of dairy businesses, market surveillance, enforcement, feedback meetings, on-spot testing, and analysis activities

7.1 Milk Samples Tested

Milk and milk product samples are collected through surveillance and inspection activities and tested by trained Dairy Inspectors and Laboratory technicians. A total of 6,004 milk and milk product samples were analyzed in FY 2022/23 as shown in table 19.

Table 15: Milk and Milk product Samples analyzed by Milk Shed

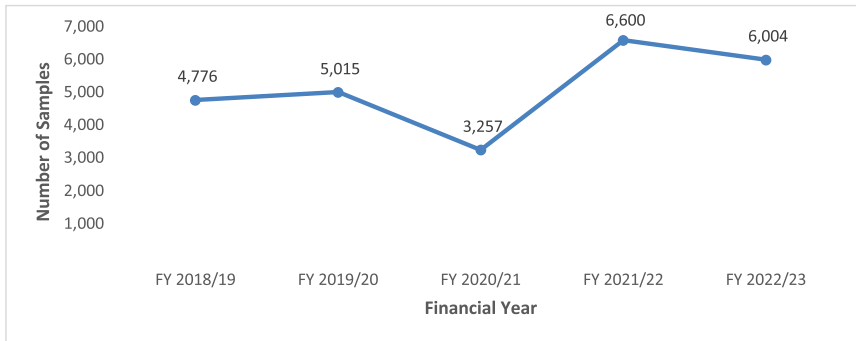

Milk shed/laboratory	Samples tested and analyzed
National Dairy Analytical Laboratory	2,284
Midwest	1,380
Southwest	755
Central	553
Northeast	505
Northern	258
Eastern	243
Busia-Malaba	24
Mutukula	2
Total	6,004

Source: DDA Annual performance report 2022/23

7.1.2 Milk and Milk product Testing and Analysis

Samples tested included raw milk, UHT, Pasteurized milk, Yoghurt, Milk powder, Ice cream, Butter, Ghee, and Infant Formula. The total number of samples tested and analyzed in FY 2022/23 decreased by 9% as compared to FY 2021/22.

Figure 11: Trend of Milk Samples Tested and Analyzed for the last five years

7.2 Milk Shed Laboratories and Mobile Laboratory Vans

The Authority operates a Milk Shed approach in implementation of its mandate and has established six Milk Shed offices in the Country. The plan is to have all the six Milk Sheds with well-equipped dairy laboratories to be able to test milk samples. However, out of the six Milk Sheds, only five have operational dairy laboratories as seen in Table 16.

Table 16: Dairy laboratories by Milk Shed

Milk Shed.	Number of laboratories	Number of Mobile Laboratory Vans
Southwest	1	1
Central	1	1
Eastern	0	
Midwest	1	
Northeastern	1	
Northern	1	
Total	5	2

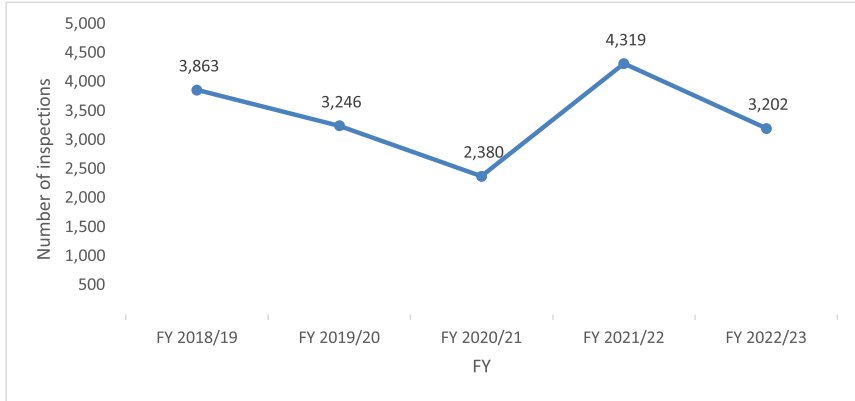

Source: DDA annual report

Mobile laboratory vans provide milk testing services on an on-spot basis boosting up the Milk shed Mini laboratories and the National Dairy Analytical Laboratory (NDAL). The Authority currently has 2 mobile laboratory vans operating in Central and South-western Milk Sheds as seen above.

7.3 Total Milk Shed Inspection of Milk Handling Premises and Border consignments carried out in FY 2022/23

As a measure of performance, the Authority compiles total inspections carried out annually. Inspections are carried out on dairy equipment, premises and consignments. During FY 2022/23, a total of 3202 premises were inspected across the country showing a 26% decline as compared to the previous year FY 2021/22 (4,319).

Figure 12: Changes in dairy inspections for the last five years

Source: DDA Annual performance report 2022/23

7.4 Market Surveillance

Market Surveillance includes both active and reactive activities carried out and measures taken by the Authority to ensure that milk and milk products on the market comply with set dairy standards and regulations. A total of 35 market surveillance activities were carried out.

Table 17: Market Surveillance Activities carried out in FY 2022/23 per Milk Shed

Milk shed	Market Surveillance activities done
Midwest	12
Northern	8
Southwest	4
Eastern	3
Central	3
Northeast	2
TOTAL	35

Source: DDA Performance reports

7.5 Mobile Laboratory Vans

Mobile Laboratory vans provide milk testing services on an on spot basis in support of the regional milk laboratories and the National Dairy laboratory. The Authority currently has only 2 mobile laboratory vans in the Southwestern and Central milksheds.
